

Pages xvii-xxv from "Given Methods a Chance" by Kyle Green and Sara Lageson

1. I find the topic of the "black box" interesting, as people focus on the research to be dry in the book. The research from what I learned from CODES is enjoyable because it goes beyond finding information that can show evidence in many ways, such as pictures, colors, voices, and organization with the community. There are so many things just looking up information.
2. I found the term "Methods." confusing as I read in the book on research because, yes, it can sometimes "leave readers lost in a maze." Even I don't know where to start or where to look, which makes it feel overwhelming and useless.
3. I like that the book mentions a podcast that provides information on different research methods and strategies, making it engaging as a source of information for your research.
- 4&5. I had difficulty understanding some of the information on these few pages as I saw new words like ethnographers and epistemological. Even though I was exposed to these new words, I understand that the book wants to change its perspective on how to approach research to show us that there are many ways to connect with your research paper.
