

Hi, I'm Jay'len Alcin, a junior studying Mechatronics and Robotics Engineering at SIUE. I like to think of myself as a dreamer with a big imagination—I use that mindset to set ambitious goals and build real-world solutions.

I've built up hands-on skills in Coding, CAD, 3D printing, research, and technical leadership. Long-term, my goal is to launch a business in the defense industry to develop next-generation defense technology, and I also speak German. Right now, I'm looking for an engineering internship where I can apply my problem-solving skills and push advanced tech projects forward.
