

Reflection 2#

One part that grab my interest the most ~~is~~^{was} the social & environmental costs of Cheap Clothing. In today's age overconsumption is extremely common. In the beginning it talked about direct & indirect drivers.

I would say social media is a huge direct driver to why people overconsume for example tiktok shop. It promotes hundred of products in a way to make people believe that they need it & will improve their life. The problem of fast fashion & online shopping in America is brought up. We have went from 95% of clothing being in America to 3%. They export other countries for cheaper clothing. They are not paid fair prices. It also affects biodiversity since so many people are growing cotton to fuel the overdemand of it. It causes workers to be injured & killed. MEA is ~~to~~^{mainly} about bio diversity.

The importance of bio diversity is undermined in my opinion. The talk of pollution in Indian Ocean also picked my interest. The indirect of Globalization was interesting to me.

I thought connections of the continents had few cons but that's clearly wrong. The readings has caused me to look into more things of my environment.
