Title: Sustainable World: Wicked Problems & Their Resolutions

Author: Sonya Remington-Doucette

Source Date: 2017

Source Type: BOOK

Context (what is important to note about the creator, when it was created, its audience, or its format?): \_\_\_\_\_

The creator is Sonya Remington-Doucette, who has a Ph.D in Oceanography and studies rivers. The format is a textbook with pictures and engaging excerpts. This book was written in 2017 which makes it recent and reliable. Its audience is students which is helpful for us in the CODES program.

Summary (what important facts about the source's content should we note for our discussion): \_\_\_\_\_

A wicked problem has no definite solution. Resolving, not solving. ↳ is irreversible. The most effective resolution may not be a resolution in some areas. \*Bottom excerpt on pg 74\* Tool box analogy. SESs. Reductionist + thinking part by part. Holistic is opposite (think body systems) cascading effect. Pos/Neg feedback

Analysis (what should we take away to better understand our problem and its stakeholders?): \_\_\_\_\_

There is not 1 simple solution to the southern American bottom crisis. There are multiple resolutions that can help better it every little piece can be broken down even further. If we find a good resolution for our wicked problem, there may be more problems that arise because of what we do. Some stakeholders may not agree with our resolution, but that is what comes with the wicked problem.
