

3. Article 3 Title: Biodiversity and conservation as a promising frontier for behavioral science

a. Goal of study:

offer different perspectives from a behavioral science standpoint on conservation and biodiversity.

b. Is this a review or primary research article:

review paper

c. General Approach (if primary research paper research):

environmental health policy

d. 3 major findings:

- stakeholders such as governments influence environmental policy

- behavioral science is underutilized in conservation

e. Why this is significant to society:

A mixed methods approach to environmental health is

It promotes common sense environmental approach.

4. Article 4 Title:

Transformation beyond conservation: how critical social science can contribute to a radical (2024)

a. Goal of study: A qualitative approach was made to the research. surveys were sent out to ask questions about knowledge on conservation.

b. Is this a review or primary research article: primary

c. General Approach (if primary research paper research):

find potential pathways or potential obstacles to transform into biodiversity conservation policy and practice

d. 3 major findings:

1. Allowing natural resources to be conserved and used for other purposes

2. high global focus in the role of science

3. high local focus on centered meanings of co-existence

e. Why this is significant to society:

Allowing natural resources to be conserved and used for other purposes that may require more attention. If this study can get enough attention. Avoiding harmful practices
